## Approved For Release 2001/03/06: CIA-RDP82-00457R009200250002-5 REPORT NO. INFORMATION CD NO. COUNTRY Germany (Russian Zone) DATE DISTR. 2 January 1952 SUBJECT Electrolytic Lead Refining Installation NO. OF PAGES 1 at Huettenwerk Halsbruecke, Saxony 25X1A PLACE NO. OF ENCLS. **ACQUIRED** DATE OF SUPPLEMENT TO 25X1X INFO. REPORT NO. A new installation for the electrolytic refining of lead is being built in Halsbruecke near Freiberg, Saxony (N 51/K 97), and is scheduled to start production by 1952. During 1952 the plant will be expanded to achieve a production of 1,200 tons in 1953. The Eilenburg (N 52/E 32) Colluloid Plant supplied plastic tubes for

hydrofluosilicic acid for the new installation. The lead content of the watery lead-silicon-fluoride solution is 90 grams per liter, \*\*

25X1A

25X1A \*\*

Zell::loidfabrik Eilenburg SAG, Plastik. The installation for the electrolytic refining of lead will probably be built in the Halsbruccke Huettenwerk (metallurgical plant), which produces lead, gold, silver, platinum, bismuth metal and compounds,

semifinished material made of nonferrous motals, copper sulphate, lead castings and sulphuric acid. The Walsbruccke Muetienwerk is an enterprise of the VVB Buntmetall (Association Nationalized Monferrous Metals Enterprises).
